To whom it may concern,

**Re: Conversion of Air Conditioning Refrigerant to SAFE 22**

Our company has achieved great successful in Energy Conservation Program through saving on electricity consumption by converting to refrigerant SAFE 22 with professional support from m/s CoolSpec Air-Conditioning Engineering.

We concluded that the refrigerant conversion is an effective and simple program. In comparison with Freon R22, our equipments now use 50% less refrigerant yet achieving better cooling characteristic and at the same time consumes lesser energy.

Even though, the refrigerant is classified as highly flammable, but through proper handling and with professional support from our value-add contractor, m/s CoolSpec Air-Conditioning Engineering, the conversion safely perform and had no account of any flammability incident.

Yours Sincerely

Aw Wai Kheong
